Founded in 1994 as United Excel Corporation (UEC) — and reintroduced as StructSure Projects (SSP) in 2019 — the firm originally incorporated in Kansas City. A commitment to quality and timeliness garnered SSP a reputation for excellence that allowed it to expand its footprint outside the greater Kansas City area. Today, SSP is one of the nation’s leading federal government contractors.

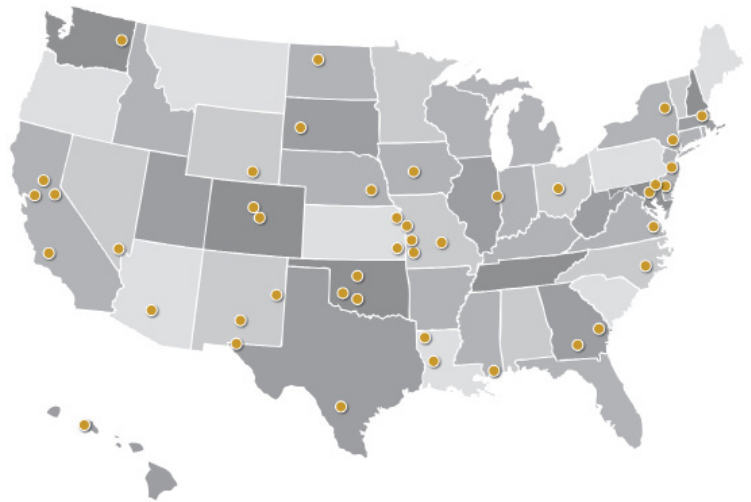

SSP is committed to effectively managing and delivering successful projects on time and within budget. The team is composed of preconstruction managers, project managers, administrators, superintendents and craftsmen who have built their careers in a variety of construction models and types.

As a contractor specializing in federal government construction, SSP is currently executing task orders in various geographic locations for multiple government entities, and is a member of 10 federal government construction MATOCs. These projects are executed for federal government facilities and military installations nationwide, and are specifically geared towards repairs, renovations and new construction. Nearly all of these projects included electrical, mechanical, building envelope, architectural and structural infrastructure systems repairs, with a number requiring work in secure areas.

Our portfolio includes projects managed by the Louisville, Kansas City, Mobile, Huntsville, Ft. Worth, Baltimore and Little Rock District Corps of Engineers offices; FAA; GSA and more.
